
Nc Nf^2 layer, order 18: one series per point, chosen for the best worst case over lmL a1, lrP a1, lpL g1, lrM g1
best common series (triangle)
lines: current split v >= 0.45 max(u, w)
its digits, worst of the 4 coefficients
min 6.2, >= 6 at 100.0%
best common series ((s, p) square)
lines: current split v >= 0.45 max(u, w)
its digits, worst of the 4 coefficients
min 5.9, >= 6 at 99.8%
u
v
s = u/(u+v)
p = u+v
digits: |error| / max(|f|, median |f|)
threshold (w, u), Bernoulli
(u,v) corner, s = 0
(u,v) corner, s = 1
(w,v) corner, s~ = 0
(w,v) corner, s~ = 1
